

## What we need before we start doing setup?

1. SQL Server 2019
2. SQL Server Management Studio
3. Sitecore 9.3 XP0 Developer Workstation package
4. Solr 8.1.1

### **To work with code and deployment locally:**

1. Sitecore TDS package for locally building and publishing
2. Visual Studio 2019

### **If you have JSS:**

1. Sitecore JavaScript Services Server for Sitecore 9.3 XP

### **Check the sitecore 9.3 supported integrations and tools here:**

[https://support.sitecore.com/kb?id=kb\\_search&kb\\_knowledge\\_base=b5231065db70dc109e54320a689619bf](https://support.sitecore.com/kb?id=kb_search&kb_knowledge_base=b5231065db70dc109e54320a689619bf)

### **Platform:**

- Windows 10 x64

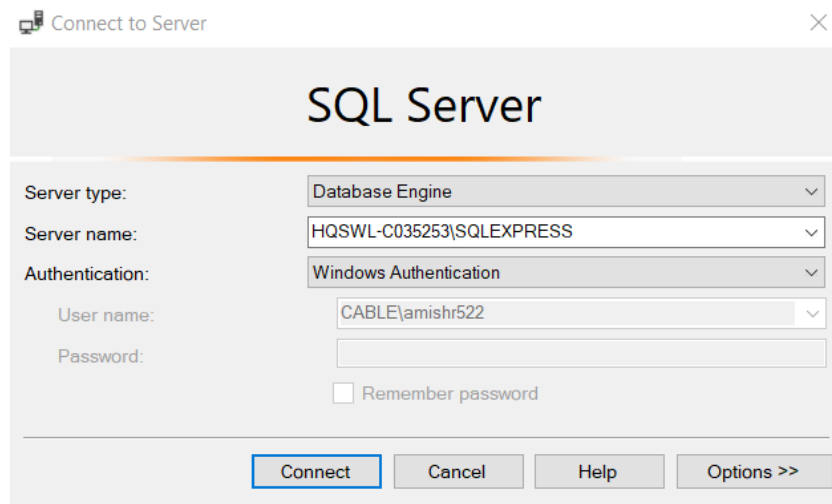

### **Pre-requisites:**

- Download SQL Server 2019 Express: <https://go.microsoft.com/fwlink/?linkid=866658>
- Download SQL Server Management Studio v19.9.2: <https://aka.ms/ssmsfullsetup>
- Download Sitecore 9.3 XP0 Developer Workstation package (Graphical setup package for XP Single):  
<https://sitecoredev.azureedge.net/~media/A1BC9FD8B20841959EF5275A3C97A8F9.ashx?date=20191213T115458>
- Download Sitecore TDS v6.0.0.30: <https://www.teamdevelopmentforsitecore.com/-/media/TDS/Files/TDS%20Downloads/TDS%2060030.zip>
- Download Visual Studio 2019: <https://visualstudio.microsoft.com/thank-you-downloading-visual-studio/?sku=Community&rel=16>  
OR: <https://visualstudio.microsoft.com/thank-you-downloading-visual-studio/?sku=Professional&rel=16>
- Download Solr 8.1.1: <https://archive.apache.org/dist/lucene/solr/8.1.1/solr-8.1.1.zip> (usually sitecore 9 setup downloads and installs it itself)
- Download JSS package (Sitecore JavaScript Services Server for Sitecore 9.3 XP) :  
[https://dev.sitecore.net/Downloads/Sitecore\\_JavaScript\\_Services/130/Sitecore\\_JavaScript\\_Services\\_1300.aspx](https://dev.sitecore.net/Downloads/Sitecore_JavaScript_Services/130/Sitecore_JavaScript_Services_1300.aspx)  
  
<https://sitecoredev.azureedge.net/~media/6D84DB513F114C15BAF5BCDEF91EFF21.ashx?date=20191126T092707>

## LOCAL SITECORE 9.3 SETUP

### Start Setup:

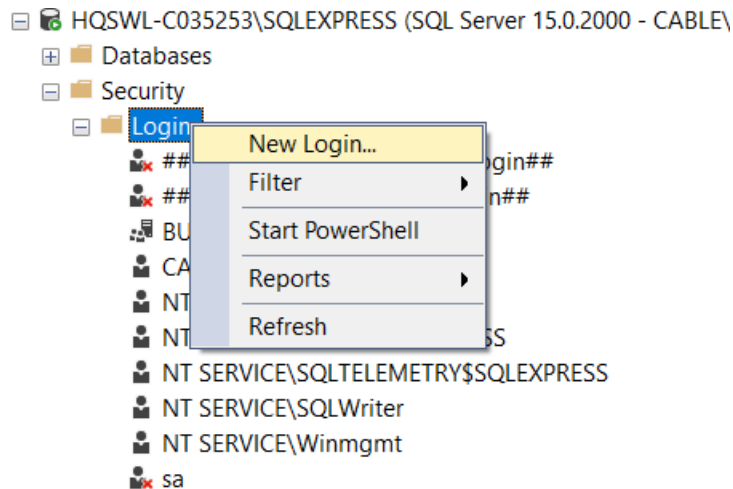

- 1- Install SQL Server 2019
  - a. Connection string:  
Server=localhost\SQLEXPRESS;Database=master;Trusted\_Connection=True;
- 2- Install SQL Server Management Studio
- 3- Setup "sitecore" user/role
  - a. Open SQL Server Management Studio
  - b. Login using windows authentication

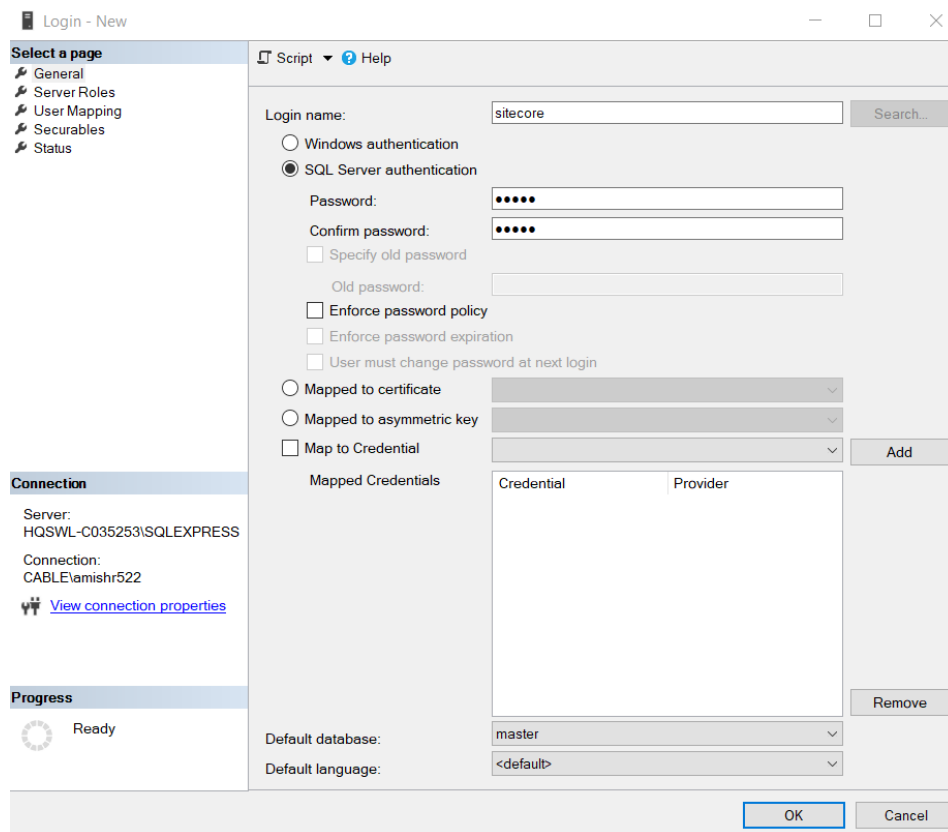

- c. Connect and Create the user/role named "sitecore".
- d. Go to Security > Logins > Right click to create "New Login"

## LOCAL SITECORE 9.3 SETUP

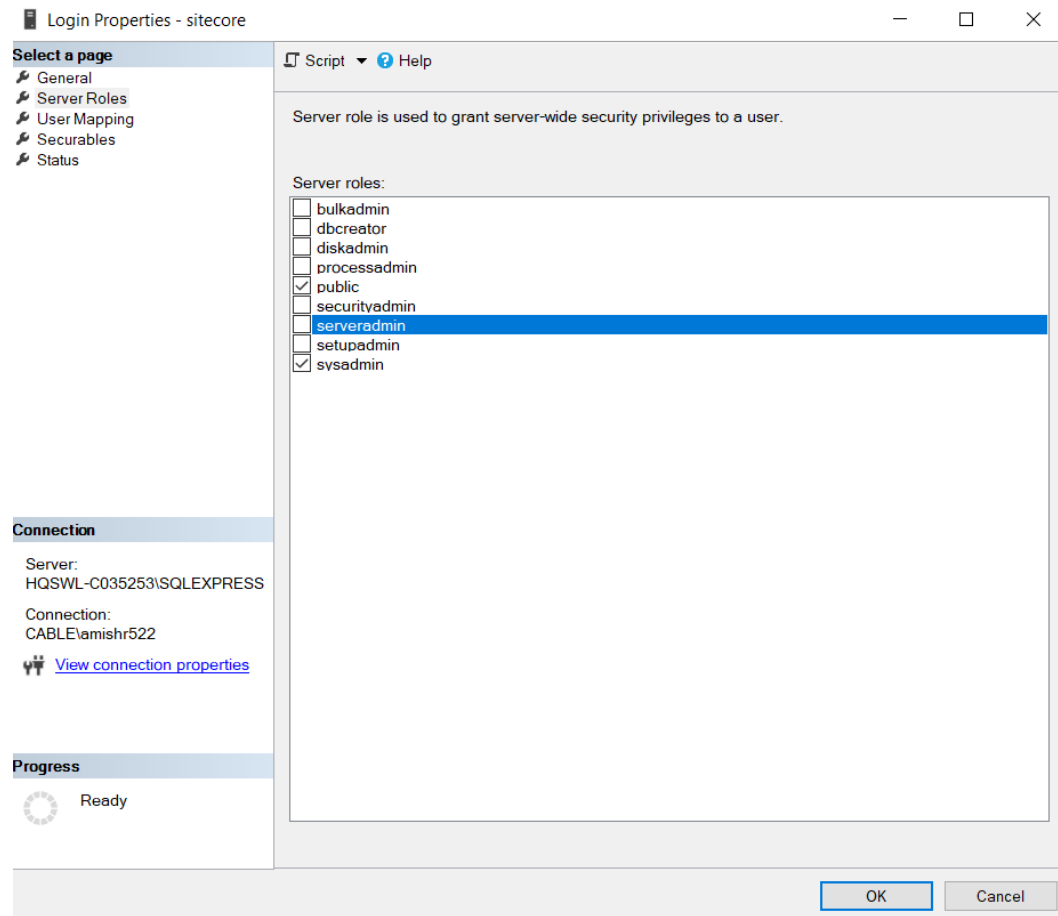

- e. Provide Login name as 'sitecore' > select "SQL Server authentication" > Provide the password you want to use, e.g. 'admin' > Confirm password > Disable Enforce password policy and other options to keep it simple for local setup > Click "OK" to complete the step. Refer screenshot below.

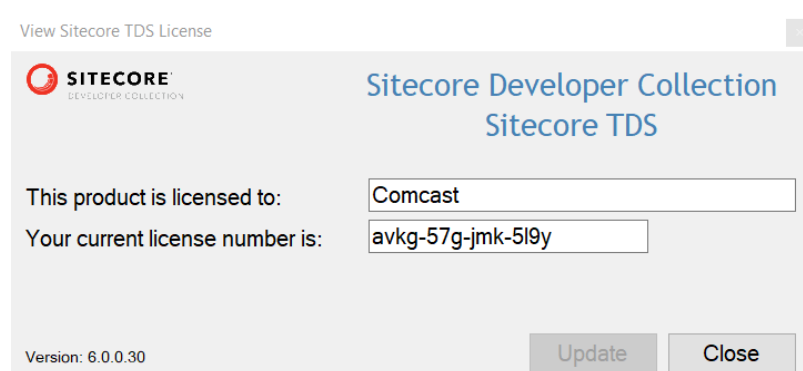

- ✓ Update the "Server Roles". Select 'sysadmin' role and Click "OK" to complete the step. Refer screenshot below.

## LOCAL SITECORE 9.3 SETUP

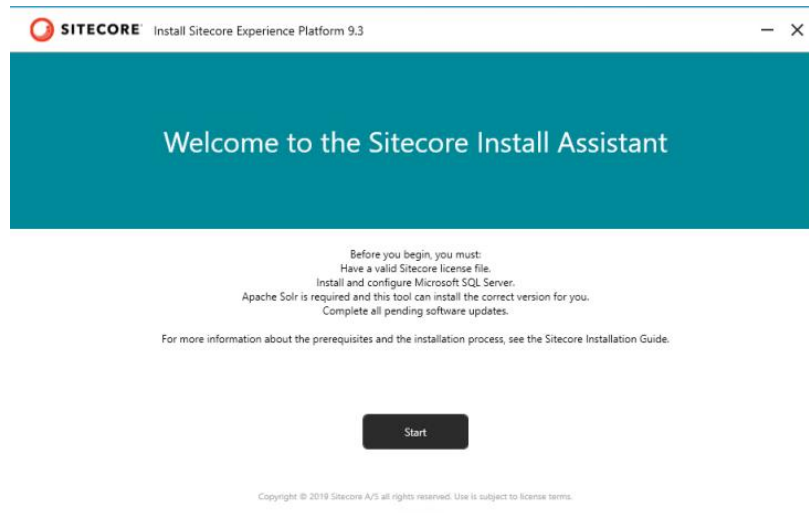

- 4- Install Visual Studio 2019 and all required packages.
- 5- Install Sitecore TDS from the package.
  - a. Post installation of Visual studio and Sitecore TDS package, setup Sitecore TDS license.
    - ✓ In visual studio 2019, **Go to Help > View Sitecore TDS License**
    - ✓ Provide organization name and license key to complete the setup.

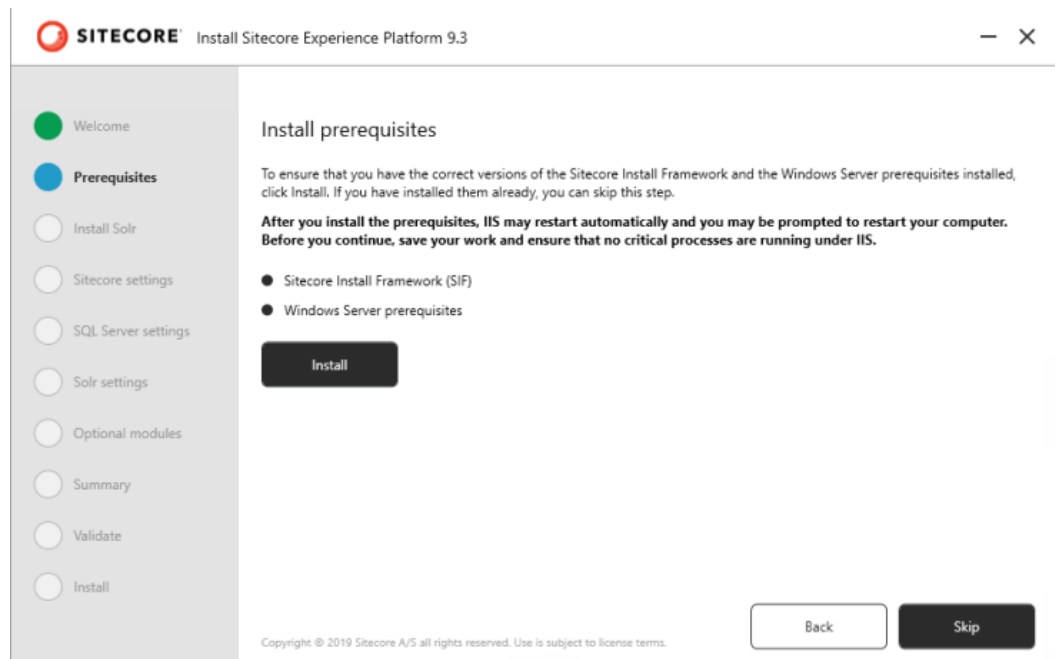

## LOCAL SITECORE 9.3 SETUP

### 6- Install Sitecore:

- Extract the Sitecore 9.3.0 rev. 003498 (Setup XP0 Developer Workstation rev. 1.1.1-r4) package
- Click “**setup.exe**” to start the setup. As the setup progresses the logs will be written in following directory: C:\Users\<userId>\Sitecore.InstallAssistant  
e.g.: C:\Users\amishr522\Sitecore.InstallAssistant

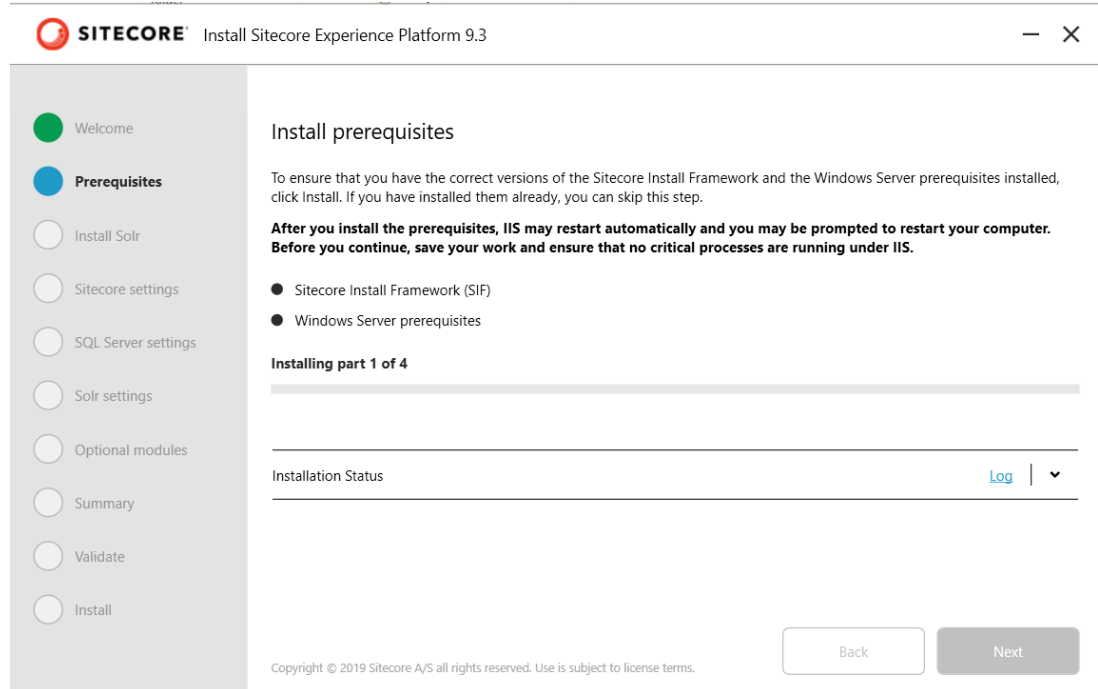

- Click on “**Start**” as shown in the screenshot above to begin, you would see following screen:

## LOCAL SITECORE 9.3 SETUP

- d. The mandatory components are by default selected and can't be un-selected anyway so just click "Install" to continue. You would see following screen next:

### Install prerequisites

To ensure that you have the correct versions of the Sitecore Install Framework and the Windows Server prerequisites installed, click Install. If you have installed them already, you can skip this step.

After you install the prerequisites, IIS may restart automatically and you may be prompted to restart your computer. Before you continue, save your work and ensure that no critical processes are running under IIS.

- Sitecore Install Framework (SIF)
- Windows Server prerequisites

Installing part 1 of 4

Installation Status

Too see the logs  
click here.

- e. A common error encountered during the sitecore 9.3 setup is as given below. The error can be seen on screen as well as in log at:

C:\Users\amishr522\Sitecore.InstallAssistant\PrerequisitesInstallationLog\_.txt

**Error (A pre-requisite required for the setup no longer exists at the configured download location):**

[DownloadWebPlatformInstaller]:[Download]  
<https://download.microsoft.com/download/C/F/F/CFF3A0B8-99D4-41A2-AE1A->

## LOCAL SITECORE 9.3 SETUP

```
496C08BEB904/WebPlatformInstaller_amd64_en-US.msi =>
C:\Users\AMISHR~1\AppData\Local\Temp\WebPlatformInstaller_amd64_en-US.msi
Error downloading https://download.microsoft.com/download/C/F/F/CFF3A0B8-
99D4-41A2-AE1A-496C08BEB904/WebPlatformInstaller_amd64_en-US.msi: The
remote server returned an error: (404) Not Found.
[TIME] 00:01:22
Error downloading https://download.microsoft.com/download/C/F/F/CFF3A0B8-
99D4-41A2-AE1A-496C08BEB904/WebPlatformInstaller_amd64_en-US.msi: The
remote server returned an error: (404) Not Found.
```

### Fix:

A fix is suggested here: <https://stackoverflow.com/questions/67826547/sitecore-10-1-installation-error-with-sitecore-installation-assistance-sia>

- ✓ Open the Sitecore package extraction directory
- ✓ Look for '**Prerequisites.json**' file and find following tag '**WebPlatformDownload**'

e.g.: C:\Personal\ProjectSofts\Sitecore setup\Sitecore 9.3.0 rev. 003498 (Setup XPO Developer Workstation rev. 1.1.1-r4)\Prerequisites.json

- ✓ Update the '**DefaultValue**' containing the URL with new URL as suggested in the post above.
- ✓ Here is an example:

```
"WebPlatformDownload": {
  "Type": "String",
  "Description": "Download location of Microsoft Web Platform Installer 5.0",
  "DefaultValue":
  "https://download.microsoft.com/download/8/4/9/849DBCf2-DFD9-49F5-
9A19-9AEE5B29341A/WebPlatformInstaller_x64_en-US.msi"
}
```

### Restart the setup:

- ✓ Follow the steps a to d again if you had the error discussed above.

- f. Post successful status at step 'e', you would be prompted to install "Solr search service". Note that we need to make sure we use the appropriate supported version of solr for sitecore 9.3. Check the details here:

[https://support.sitecore.com/kb?id=kb\\_article\\_view&sysparm\\_article=KB0227897](https://support.sitecore.com/kb?id=kb_article_view&sysparm_article=KB0227897)

- ✓ Determine the version you need to use, Sitecore 9.3 uses Solr 8.1.1
- ✓ Select the port you want to use, default port is: 8983
- ✓ Provide the windows service and path prefix as asked.

## LOCAL SITECORE 9.3 SETUP

- ✓ Provide the install path
- ✓ Click "Install" to start the setup and wait for setup to complete. Setup wizard will download the given version of solr (solr 8.1.1) itself and set it up for you.
- ✓ Installation logs can be see here:  
C:\Users\amishr522\Sitecore.InstallAssistant\Sitecore-InstallConfiguration\_.txt

## LOCAL SITECORE 9.3 SETUP

- h. You would be prompted to provide the SQL Server settings. Make sure steps 3a – 3e are already done and connection has been tested. Provide the “**Microsoft SQL Server instance**”, “**user name**” (we created user ‘sitecore’ and setup its role as part of step3.), and “**password**”. Click “**Next**” to proceed.

The screenshot shows the 'Microsoft SQL Server settings' window of the Sitecore Experience Platform 9.3 installer. On the left is a vertical navigation pane with steps: Welcome, Prerequisites, Install Solr, Sitecore settings, **SQL Server settings** (highlighted), Solr settings, Optional modules, Summary, Validate, and Install. The main area contains the following fields:

- Microsoft SQL Server instance:** A text box containing 'HQS\SQL-C035253\SQLEXPRESS'.
- Microsoft SQL Server admin user name:** A text box containing 'sitecore'.
- Microsoft SQL Server admin password:** A password box with masked characters '.....'.

At the bottom right are 'Back' and 'Next' buttons. At the bottom left is a copyright notice: 'Copyright © 2019 Sitecore A/S all rights reserved. Use is subject to license terms.'

- i. You would be prompted to provide the Solr instance settings. Just double check the solr windows service name and use the name as value of “**Solr Windows service name**” field. Also check the solr install directory to grab the correct path and use the same path for “**Solr file system root**” field. Click “**Next**” to proceed.

**Note:** Path and service name was strange so, after looking at the setup.exe.config, it looks like the field above of “**Solr Windows Service Name**” gets added to the front of a hard coded “solr-8.1.1” which results in the solr-8.1.1solr8.1.1. See the details below.

```
<parameter name="SolrServicePrefix" type="text" groupName="InstallSolr" />
<parameter name="SolrInstallRoot" type="folderPath" groupName="InstallSolr"
value="C:\Solr" />
<parameter name="SolrRoot" type="text" groupName="Solr"
value="{Solr.SolrInstallRoot}\{Solr.SolrServicePrefix}Solr-8.1.1" />
<parameter name="SolrService" type="text" groupName="Solr"
value="{Solr.SolrServicePrefix}Solr-8.1.1" />
```
